

### ***Operational approach***

Pragmatism before process enthusiasm. As "doers in the midmarket", we prioritize tangible, short-term effective measures without losing sight of the overall objective

### ***Acceptance in the organization***

In line with our motto of "turning those affected into those involved", we involve management and the specialist departments in all project phases. We also keep our "sights up" when difficult decisions have to be made

### ***Knowledge sharing***

In close cooperation, we transfer many years of industry and methodological expertise to the project team. We provide the customer with detailed analyses, planning results and toolboxes

### ***Measurable results***

No measure without measurable P&L or liquidity effect. Our project is over when the defined goals are achieved

**bachert&partner**

**Performance Management**

### ***Tool application***

In complex projects, we use industry-standard measurement tools (e.g. Falcon, inAir). Application of self-developed tools for process analysis and modeling. Individual adaptation after coordination

### ***Assumption of responsibility***

On request, we take on operational responsibility for individual subprojects or functions. Speed and implementation strength are key success factors

### ***Project Management***

The basis is always a structured project organization underpinned by a project plan with clear role allocation, communication and goals

### ***Industry benchmarks***

We have best practice approaches regarding cost structures, calculations and process parameters. Access to industry practitioners and institutes on demand
